

WildPackets and Gigamon

100% Accurate Troubleshooting and Analysis of Gigabit and 10 Gigabit Ethernet Networks

Real-time network monitoring and analysis is no easy task on highly-utilized 10 Gigabit networks. Span ports for capturing data may be oversubscribed, or not even available. Simultaneous analysis of multiple data-types or multiple network segments at different speeds is often required. To address these advanced network monitoring and analysis needs, WildPackets has partnered with Gigamon to provide extremely flexible and accurate real-time visibility into any network environment.

The combined WildPackets/Gigamon solution leverages synchronized and precise nanosecond time stamping of Gigamon's GigaVUE to direct network packets with 100% time stamp accuracy into the WildPackets Distributed Analysis solution, providing reliable troubleshooting and analysis of critical network segments. Highly precise data time stamping is essential for many organizations, especially those providing financial services. From online trading to call centers relying on network services, the daily work of financial institutions runs on networks that must be optimized, secure, and compliant.

The combined WildPackets/Gigamon solution also provides complete visibility into each network port. Often, more than one port is aggregated into a single capture; however, accurate troubleshooting typically requires data collection from each individual port. This combined solution provides flexible configurations for any network analysis approach.

Gigamon's GigaVUE

Gigamon's GigaVUE provides a revolutionary way of enhancing and centralizing monitoring capabilities for multiple 10Gbps connections at full line rate. Substantially reduce network monitoring footprint and lower total network management cost while realizing "day one" ROI. Targeted at the most demanding Gigabit and 10 Gigabit networks, the GigaVUE extends complete visibility across the entire network. Any tool can be connected to any data source at any speed or media at any time making the monitoring of your Gigabit and 10 Gigabit networks affordable and easy to manage.

The combined power of WildPackets and Gigamon delivers the most reliable and secure network analysis and troubleshooting solution.

WildPackets Distributed Analysis Solution

WildPackets fully-integrated Distributed Analysis Solution gives network engineers real-time visibility into every part of the network simultaneously from a single interface, including Ethernet, Gigabit, 10 Gigabit, 802.11a/b/g/n wireless, VoIP, Video, and IPTV links to remote offices. Now network engineers can rapidly troubleshoot faults and fix problems to maximize network uptime and user satisfaction.

Combining WildPackets Distributed Analysis Solution with Gigamon's GigaVUE gives network engineers precise real-time visibility into their networks, and enables them to take full advantage of the WildPackets Distributed Analysis Solution's Expert analysis, application monitoring, and Voice and Video over IP troubleshooting.
